

ORBIT

by Oaklin

01 Positioning Statement

Orbit gives organisations a clear diagnostic of their operational maturity — benchmarked against competitors — so every team knows exactly what's holding them back and what to do next.

02 Tone of Voice

Authoritative

Orbit speaks from evidence. Every insight is grounded in data and benchmarks, never opinion. Users trust what they read because it feels rigorous and objective.

Direct

No softening, no jargon, no padding. Orbit tells you what the data shows and what needs to happen next. Respectful but unambiguous — the kind of clarity that saves time.

Human

Behind the data is a partner, not a machine. Orbit acknowledges that operational challenges are people challenges. The tone is warm enough to feel supportive without losing its edge.

Core Principle

Every gap is an opportunity — not a shortcoming. Orbit always frames findings as clear, addressable opportunities. Language is forward-facing: here's where you can go, not where you fell short.

03 Colour Palette

**Deep Forest**

#1A4D23

Primary**Mid Green**

#2E7D3A

Secondary**Amber Gold**

#F5A623

Accent**Off White**

#F7F7F7

Background**Near Black**

#1A2E1C

Text

04 Typography

Heading Font

Arial Bold

Use for all headings, titles, section labels and key callouts.

Body Font

Arial Regular

Use for body copy, descriptions, tooltips and supporting text.

Arial is a system font — renders cleanly across all environments.

05 Visual Do's & Don'ts

DO

- + Lead with data, benchmarks and credibility**
Every finding must be grounded in data and shown in context of industry benchmarks. Where relevant, highlight what high-performing teams do differently — this turns a score into a meaningful, credible insight that clients take seriously.
- + Make actions clear, prioritised and time-framed**
Every diagnostic output must connect to a specific action. Clearly distinguish between short-term wins — things a team can act on immediately — and longer-term goals that require sustained effort. Actions should feel purposeful, not generic.
- + Keep visuals clean, consistent and focused**
Use colour consistently to signal meaning — the same shade always means the same thing. One insight per visual, never overloaded. White space is intentional. The overall aesthetic should feel reputable and considered, not busy or cluttered.

DON'T

- Never present a finding without context**
A score in isolation means nothing. Always show it against a benchmark or peer average.
- Don't mix action timeframes without labelling them**
Short-term wins and long-term goals must always be clearly distinguished — never grouped together as a flat list.
- Avoid decorative complexity**
No unnecessary gradients, textures or visual noise. Credibility comes from restraint and clarity, not decoration.
